## Field

Industrial Organization — developing empirical methods for applied microeconomics: demand, production, and the measurement of market power, applied wherever imperfect competition shapes outcomes, from public procurement and productivity to labor market power, school competition, environmental regulation, and health care

## Working Paper

### Markups and Public Procurement: Evidence from Czech Construction Tenders

*First Place, 32nd Young Economist of the Year Award, Czech Economic Society, 2025*

Public procurement raises firm markups by approximately 15% during contract years, estimated on a 2006–2021 panel of Czech construction firms through a structural production-function framework, with selection-on-observables designs and models for unobserved factors addressing participation bias. A temporal analysis using synthetic-control and matrix-completion methods shows treatment effects declining from roughly 30% in 2006 to 10% in 2021 — consistent with institutional improvements and increasing efficiency in Czech public spending. Substantially revised and extended during Yale Ph.D. coursework, 2025–26; latest draft available on request.
