Research Interests: Models and Measurement (Industrial Organization/Econometrics)

Education

Yale University 2025 – present
Visiting Student, Graduate School of Arts and Sciences

- Honors (highest grade): Industrial Organization I (ECON 600), Econometrics IV (ECON 553)
- Audited: Econometrics III (ECON 552), Industrial Organization II (ECON 601)
- In progress: Measure Theory and Integration (MATH 320), Fall 2026

Stockholm School of Economics, Sweden 2023 – 2025
M.S. Economics, GPA 4.68/5.00; President's List (top 10% of the program cohort)

- Relevant coursework: Advanced Mathematics for Economic Analysis, Advanced Microeconomic Theory (both 5.00/5.00)
- Ph.D. coursework (Stockholm University): Econometrics I–II, Applied Empirical Economics I, 2024
- Thesis: "Markups and Public Procurement: Evidence from Czech Construction Tenders", awarded the highest grade; advisor: Jaakko Meriläinen
- Exchange semester, Bocconi University, Spring 2025: Introduction to PDEs, Information Theory, Optimization, Deep Learning and Reinforcement Learning
- SSE team captain, Econometric Game, University of Amsterdam, 2024
- Teaching fellow, undergraduate econometrics, 2023

Charles University, Institute of Economic Studies, Prague, Czech Republic 2020 – 2023
B.S. Economics, summa cum laude; study average 1.19 (1 = best, 4 = fail)

- Mathematics I–IV (26 ECTS), taught by the Faculty of Mathematics and Physics: real analysis in one and several variables, linear algebra, optimization, difference and differential equations
- Thesis: "Markups and Public Procurement", awarded the highest grade; advisor: Matěj Bajgar
- Exchange semester, Maastricht University, Spring 2023: Dynamic Modelling and Dynamic Optimisation

Honors & Awards

- First Place, Young Economist of the Year Award, Czech Economic Society, 2025 (national competition for economists aged 30 or under; papers submitted anonymously), for "Markups and Public Procurement: Evidence from Czech Construction Tenders"
- Participant, 8th Lindau Nobel Laureate Meeting in Economic Sciences, 2025 (about 300 young economists selected worldwide); nominated by the Royal Swedish Academy of Sciences
- Scholarship for Outstanding Academic Achievement, Charles University, 2023

Research

Markups and Public Procurement: Evidence from Czech Construction Tenders 2024

- Firm markups are about 15% higher in contract years than in comparable firm-years without a public contract; the premium declines from roughly 30% in 2006 to 10% in 2021 (production approach, firm panel)
- Replication package in the Applied Economics Incubator's production-function collection (UChicago, 2026)
- Presented: Yale Pre-Doctoral Economics Conference (2026); Czech Economic Society award talk (2025)

[Paper] [Slides] [Code] [Award Talk]

Reproducible and Robust by Design: The Reproducibility and Robustness of Social Science Research by Method and Field
with Nikolai Cook, Abel Brodeur and others (Institute for Replication); work in progress

- Reproduction of Exley and Kessler, "The Gender Gap in Self-Promotion" (*QJE* 2022), with Alistair Cameron, Florian Heine and Fatma Selcen Palut; Replication Games, EEA-ESEM Rotterdam, 2024 [Report]

Research Positions

Predoctoral Fellow, Tobin Center for Economic Policy, Yale University 2025 – present
For Seth Zimmerman

- Wrote a price-theoretic model of school size (a district with a fixed budget trades the gains from smaller schools against per-school overhead), with its closed-form optimum and estimating equations, and estimated it on New York City school records; wrote a school production function with timing and information-set assumptions from the IO productivity literature
- Contributor to the Broad Center's public Superintendent Research Dataset (v2, 2026), a panel of superintendents in more than 10,000 U.S. school districts
- Assembled and tested an archive of New York City's School Allocation Memoranda, fiscal years 2004–2026 (4,900 files), with automated checks of its completeness and accuracy against the city's index pages
- Reproduced an inherited school-by-year finance panel of New York City public schools, 2003–2017 (23,000 school-years, from city expenditure records and allocation memoranda) with exact parity, then audited and repaired it; checked the coded funding rules against the memoranda and extended the designs built on them, for studies of Title I, class-size reduction and Fair Student Funding
- Built a panel of U.S. school-board decisions from a corpus of meeting documents (1,159 districts, 43 states): 1.2 million motions with their votes, extracted by a validated pipeline on an open-weight language model hosted at Yale SOM; data paper in draft

For Barbara Biasi

- Ran Rambachan–Roth sensitivity analyses for parallel trends in a difference-in-differences study; coded optimal bandwidths for the regression-discontinuity analysis of "School Board Capacity" (NBER WP 34590)
- Built panels of federal R&D by institution, field and agency for 975 universities in the National Science Foundation's Higher Education R&D Survey, 2010–2024, with a field crosswalk, and from them measures of exposure to federal research funding for Arellano-Bover, Biasi and Saltiel (2026)
- Built the contact database for a national survey of school-district leaders, on existing superintendent data: verified superintendent emails for 11,688 of 13,195 districts, each with its source; ran the final collection round on Yale SOM's HPC cluster
- Wrote a collector that finds, dates and verifies teacher union contracts for the election years 2001–2019 (443 districts so far) and prepared public-records requests where none was online
- Built an analysis-ready dataset of scientists and their attributes by OCR of the scanned editions of *American Men & Women of Science*

Research Assistant to Ingvild Almås, IIES, Stockholm University 2024 – 2025

- Built consumption aggregates and item-response (IRT) measures of child development for the Kizazi Kijacho early-childhood experiment (3,600 Tanzanian households); estimated latent-factor models of caregivers' decision making, starting from the replication code of Almås, Attanasio and Jervis (*Econometrica*, 2024)

Research Assistant to Matěj Bajgar, IDEA at CERGE-EI, Prague 2022

- Helped build the Web of Science researcher–publication matched database for IDEA Study 11/2022

Short Courses

- math+econ+code masterclasses, Prof. Alfred Galichon (NYU): Discrete Choice Models and Applications in Economics (with Antoine Jacquet), Sciences Po, May 2026; Estimating Large-Scale Matching Models, Collegio Carlo Alberto, Turin, March 2026; both taught online
- Summer course in econometrics, Prof. Magne Mogstad (University of Chicago) with Deniz Dutz; University of Stavanger, June 2025 (remotely)

Skills & Personal

Software: Bash, Python, R, Stata, Julia, MATLAB, Git, LaTeX
Languages: Czech (native); English (fluent); German (intermediate)
Sports: Yale club cycling, running and triathlon; intramural soccer (Economics team, Invisible Feet)
