Theses Chadim, M. “Markups and Public Procurement: Evidence from Czech Construction Tenders”, 2025.
https://hhs.primo.exlibrisgroup.com/permalink/46SSOE_INST/hejhp1/alma991001619398206056

Abstract: This paper analyzes the effect of public procurement on firm markups, using a panel dataset of Czech construction firms from 2006 to 2021. Markups are estimated through a structural framework, while biases are addressed using a selection-on-observables design and models for unobserved factors. Propensity score-based estimations indicate that firm markups increase by approximately 15% during contract years. A temporal analysis, employing synthetic control and matrix completion methods, reveals that treatment effects decline from around 30% in 2006 to 10% in 2021. These patterns are consistent with institutional improvements in the Czech Republic and offer empirical evidence of increasing efficiency in public spending on construction projects.

Abstract: This thesis analyses the relationship between engagement in public procurement and markups charged by firms. While controlling for aggregate trends and individual firm characteristics, the effect is estimated in a multivariate regression framework as the percentage markup premium associated with engagement in public procurement. This approach contributes to the existing literature on public procurement, in that, rather than only making comparisons between different tenders, it benchmarks the competitiveness of public procurement against the competitiveness in markets serving private clients while not having to rely on data on expert cost estimates.
